

Tiberbu HMIS Overview

The purpose of the HMIS is to generate quality health information that provides specific information support for the decision making to monitor and improve performance of the health sector.

HIS is more than a system for data collection and generating quality information, and encompasses the continued use of the information for decision making as well.

A well-functioning health information system is one that ensures the production, analysis, dissemination and use of reliable and timely information on health determinants, health systems performance and health status.

Tiberbu HMIS supports the PCN model towards Universal Health Coverage(UHC)

The Primary Care Network model

Tiberbu HMIS Modules

Tiberbu has the following modules, which are integrated together to see a successful journey of a patient from the moment they walk into a facility to the time they leave.
